

Technical Business Analyst / Acting Product Owner within Virgin Media O2’s B2B network automation. Sole BA across three engineering squads, translating complex operational and technical requirements into refined backlogs, workflows and developer-ready tickets, while supporting delivery, defect triage and production issue investigation. MSc Theoretical Physics with hands-on Python and SQL experience.

EXPERIENCE

Netbuilder, Virgin Media O2 – Technical Business Analyst / Acting Product Owner

Nov 2024 – Present

- Sole BA across three B2B network automation squads, owning requirements analysis, backlog refinement, workflow design, delivery coordination and production issue triage.
- Stepped into the Acting Product Owner role following sudden leadership changes, taking ownership of priorities, backlog readiness, escalations and stakeholder alignment for eight senior developers and one senior tester; directly recognised by the Programme Director for improving delivery efficiency.
- **Migrations:** Defined requirements for automation supporting a network migration programme covering approximately 2,500 devices, including pre- and post-checks, rollback, port-triggered migrations, workflow validation and failure handling across IAP, the provisioning backend and Cisco NSO.
- **Router Bootstrap:** Coordinated RCA for device bootstrap issues, analysing technical logs, working with third-party vendors and raising Cisco support cases for hardware and bootstrap failures.
- **Service Provisioning:** Analysed end-to-end provisioning workflows across a React frontend, business-logic backend and Cisco NSO, clarifying requirements, validation rules, system dependencies and production defects.
- **Firmware Service:** Documented NTU firmware upgrade and downgrade automation, mapping workflows, dependencies and operational behaviour to support security review, service clearance and handover.

Healthmaster Clinic (Family Business, Part-time) – Technical Lead

Apr 2020 – Present

- Owned end-to-end delivery of the clinic web product, covering requirements, UX, backend development, deployment, and stakeholder iteration.
- Built and deployed a mobile-first clinic website with a FastAPI backend for enquiry handling and email delivery using SMTP and SendGrid fallback.

EDUCATION

University of Durham – MSc Theoretical Physics (2:1)

Sep 2022 – Sep 2023

Dissertation: Quantum Field Theory in Curved Spacetime – awarded First

University of Bath – BSc Physics (2:1)

Oct 2018 – Jul 2021

Relevant: Computational Methods, C/C++, Python, numerical methods, Monte Carlo methods, object-oriented programming.

SKILLS

Business Analysis: Requirements analysis, workflow mapping (Visio, Draw.io), backlog refinement, acceptance criteria, stakeholder management, defect triage, root-cause analysis

Product & Delivery: Acting Product Ownership, prioritisation, Agile delivery, Jira, Confluence, dependency and delivery coordination

Technical: APIs, data flows, system dependencies, Python, SQL, MongoDB, Postgres, Cisco NSO, OpenShift, FastAPI, Splunk, Git

Additional: C/C++, MATLAB, pandas, NumPy, React, TypeScript, Tableau, UML

Languages: English, Persian, Spanish

SELECTED PROJECTS

my-trading-platform (Personal Project)

Dec 2025 – Present

- Built a modular Python trading platform covering market data, order management, risk controls, broker integration, backtesting, and P&L tracking.
- Implemented breakout trading workflows with multi-timeframe levels, ATR-based TP/SL logic, scale-ins, multi-leg exits, and IBKR broker reconciliation.
- Developed replay and backtesting pipelines using historical data, simulated execution, pytest, pandas, Postgres, FastAPI, and React/TypeScript.

Windows Notification Collector and Live Dashboard (Personal Project)

Jun 2026 – Present

- Designed and built a local Windows application that consolidates notifications from any selected app into a live dashboard, created for the purpose of organising market and trading alerts from Discord communities and other sources.
- Delivered the end-to-end solution using C#.NET, SQLite, ASP.NET Core, Server-Sent Events and React/TypeScript, including source controls, deduplication, retention, privacy-first local storage and automated testing.
