

Technical Business Analyst / Acting Product Owner with 1.5+ years' experience as sole BA across PETx, Products, and Resolve teams, supporting senior engineering squads across network automation and platform delivery. Experienced in requirements analysis, backlog refinement, workflow design, technical documentation, production issue triage, and developer-ready ticket definition. MSc Theoretical Physics graduate with strong quantitative foundations and hands-on Python, SQL, API, data, and trading-system project experience.

EXPERIENCE

Netbuilder, Virgin Media O2 — Technical Business Analyst / Acting Product Owner

Nov 2024 – Present

- Sole BA across three automation squads (PETx, Products, and Resolve) covering requirements analysis, backlog refinement, workflow analysis, delivery coordination, and production issue triage
- Took on Product Owner responsibilities for a squad of 6 senior developers and 1 senior tester, coordinating priorities, escalations, programme calls, ticket readiness, and delivery alignment following leadership changes.
- Owned technical analysis and ticket definition for PETx, a major Provider Edge router upgrade programme spanning Migration, Network Build, and Greenfield Services workstreams.
- Migrations:** Refined requirements and defect tickets for migration automation, including pre-checks, post-checks, rollback handling, dynamic port migration, workflow validation and failure scenarios
- Bootstrap App:** Shaped IOS-XR firmware upgrade rules, post-check expectations, GCP config/firmware sync behaviour, and UI workflow changes, working with network engineers and developers.
- BLUi Service Provisioning App:** Led RCA and gap analysis for defects across the BLUi app, clarifying expected behaviour, validation rules, NSO/MongoDB dependencies, migration logic, and user-facing impacts before translating findings into developer-ready tickets.
- Firmware Service:** Produced documentation for NTU firmware upgrade/downgrade automation, mapping process flows, assumptions, dependencies, operational behaviour, and handover detail to identify security review gaps and support service clearance.

Healthmaster Clinic (Family Business, Part-time) — Technical Lead

Apr 2020 – Present

- Owned end-to-end delivery of the clinic web product, covering requirements, UX, backend development, deployment, and stakeholder iteration.
- Built and deployed a mobile-first clinic website with a FastAPI backend for enquiry handling and email delivery using SMTP and SendGrid fallback.

EDUCATION

University of Durham — MSc Theoretical Physics (2:1)

Sep 2022 – Sep 2023

Dissertation: Quantum Field Theory in Curved Spacetime – awarded First

University of Bath — BSc Physics (2:1)

Oct 2018 – Jul 2021

Relevant: Computational Methods, C/C++, Python, numerical methods, Monte Carlo methods, object-oriented programming.

SKILLS

- Programming:** Python, SQL, C/C++, MATLAB
- Product & Delivery:** Agile, Confluence, Jira, requirements analysis, backlog refinement, stakeholder management, workflow design, technical documentation, RCA support
- Platforms & Tools:** FastAPI, Postgres, MongoDB, pandas, NumPy, OpenShift, Splunk, Git, Tableau, React, TypeScript, Swagger, JSON
- Certifications:** Applied Data Science with Python; Databases
- Languages:** English, Persian, Spanish

SELECTED PROJECTS

my-trading-platform (Personal Project)

Dec 2025 – Present

- Built a modular Python trading platform covering market data, order management, risk controls, broker integration, backtesting, and P&L tracking.
- Implemented breakout trading workflows with multi-timeframe levels, ATR-based TP/SL logic, scale-ins, multi-leg exits, and IBKR broker reconciliation.
- Developed replay and backtesting pipelines using historical data, simulated execution, pytest, pandas, Postgres, FastAPI, and React/TypeScript.

small-quant-model - Neural Network Trading Model (Personal Project)

May 2026 – Present

- Developed a Python ML research framework that converts historical 1-minute OHLCV data into causal chart-state sequences for neural network-based intraday momentum analysis.
- Designed leakage-aware entry-labelling logic and a bar-by-bar replay backtester to evaluate model-driven trade signals under realistic historical market conditions.
